

# Kaspersky® Hosted Security Services

**KASPERSKY® HOSTED WEB SECURITY SERVICE. KASPERSKY® HOSTED EMAIL SECURITY SERVICE.**

**Kaspersky® Hosted Security Services protect corporate networks of any size from malware and spam, ensuring safe email and web access for both internal and remote users.**

## Key benefits summary

- No operational overhead
- No capital outlay
- Predictable cost
- Substantial reduction in TCO
- Clear risk mitigation
- Users can work anywhere
- Simple policy enforcement
- Easy to manage
- Comprehensive reporting
- Business continuity

## The hidden costs of malware and spam

The danger of a major interruption to business from malware and spam is self-evident. But these threats can also affect your business in less obvious ways. While an isolated incident may be no more than an inconvenience, the cost in lost productivity soon mounts up.

As an example, imagine an organisation with 50 employees, each suffering just 15 minutes' lost productivity a day. Staff overheads alone would soon run into many thousands of pounds. In such a scenario, full email and web protection from KHSS would pay for itself in around ten days.

With Kaspersky Hosted Security Services (KHSS), your system is looked after by security experts 24x7, allowing your own IT staff to concentrate on core business operations and projects. KHSS delivers simple, rapid and immediate deployment and protection.

### No operational overhead or capital outlay

KHSS requires no hardware, no internal management resource, and no maintenance or upgrades to related hardware or anti-virus software. Even your energy consumption is reduced. Email disaster recovery is automatically taken care of, and there's instant scalability when adding new users.

Deploying Kaspersky Hosted Web Security Service requires only a simple configuration change to the proxy server on your internet gateway. Kaspersky Hosted Email Security Service needs just a straightforward modification to your MX record in the DNS.

### Substantial, measurable reduction in TCO

Because KHSS is provided as a contracted service based on a per user per annum basis, it's easy to budget for predicted costs and to see the savings being realised.

Our customers typically report a reduction in expenditure of 30% or more from KHSS, compared with traditional in-house security solutions.

### Clear risk mitigation backed with a strong SLA

KHSS is a technically superior solution to traditional IT security, because it actually prevents malicious content from reaching your corporate network in the first place. Even if a remote machine is used with another network, once reconnected KHSS scans outgoing HTTP/FTP traffic to detect traces of spyware and to prevent data leaks, enabling infected devices to be reliably identified.

**See over for more...**

With KHSS all content is scanned in real time – not simply checked against bad URLs – using a purpose-designed, fast and resilient threat management infrastructure.

There’s no time lag in deploying updates, as new threats are dealt with and anticipated immediately (Kaspersky Lab is consistently and independently rated No 1 for threat detection and for providing the industry’s fastest outbreak response time, while the Kaspersky BitHunt component of KHSS provides predictive, zero-hour protection).

Our SLA offers 99.999% availability with optimal connectivity and automated DR/backup as standard, and the service is agnostic of platform or email system.

### Simple policy enforcement and access control

KHSS can be used to create rules for internet usage, to prevent specific file types and content from being downloaded or accessed. The Anywhere+ component applies your acceptable usage policies to remote and roaming users anywhere in the world, across all devices. Non-business related web sites can be blocked during hours of your choice to ensure policy adherence.

### Comprehensive reporting

Granular reports are available on demand or can be scheduled for delivery by email. Detailed log files enable comprehensive ongoing monitoring.

### Business continuity

Incoming traffic is reduced by Kaspersky Hosted Email Security Service, with unwanted email automatically quarantined (and available for inspection) on our system. Kaspersky Hosted Email Security Service also prevents customer email servers from becoming overloaded, even during denial of service attacks. If your own mail server cannot accept emails, the service will periodically attempt redelivery. Stored email can be viewed using the secure web portal.

### 24x7 support

KHSS is managed by Kaspersky experts night and day. Although the service is simple to administer through our online portal, help is only ever a phone call away.

### Find out more

Your business could benefit from trading up to Kaspersky Lab. We’d be delighted to discuss your requirements or answer questions about our solutions and how they can provide better protection and support at an extremely competitive price. We can also give you details of our competitor upgrade deals, and talk you through the product options that are best suited to your business.

For the latest on antivirus, anti-spyware, anti-spam and other IT security issues and trends, visit [www.viruslist.com](http://www.viruslist.com).

Our client portfolio includes:

- Airbus
- BBC Worldwide
- Department for Transport
- Hyder Consulting
- ING Direct
- Manchester City Council
- MoneySupermarket.com
- Rentokil Initial Services
- Severn Trent Water
- Suffolk County Council
- Virgin Media
- Warwick University

### KHSS components

**Kaspersky Hosted Web Security Service** scans all web traffic in real time and enforces company policy to protect users and employers. It scans for malicious content, malware and spyware, prior to reaching the user; the **Anywhere+ Service** extends security to cover roaming users, and also encrypts traffic to prevent eavesdropping when outside the office.

**Kaspersky Hosted Email Security Service** provides full protection against malware and malicious code, along with effective spam identification. As a hosted service, no client side updates, hardware or software are required. Services are simply administered and reported on using a single, secure web-based portal.

Service comparison	Kaspersky Hosted Email Security	Kaspersky Hosted Web Security	Kaspersky Hosted Combined Service
Protection against spam	Yes	Yes	Yes
Protection against SMTP malware	Yes	Yes	Yes
Protection against HTTP Malware	Yes	Yes	Yes
Category filter	Yes	Yes	Yes
Attachment filter	Yes	Yes	Yes
Policy enforcement	Yes	Yes	Yes
